**A
Better
Car than
Ever at its
Price**

THE New Series Pontiac Six was designed and built in the belief that everybody admires style in a motor car.

So, in Pontiac Six, everybody can enjoy it!

Beautifully-proportioned bodies that tell their Fisher craftsmanship at a glance . . . Long, low lines and deep, massive radiator design . . . Rich harmonies of color in exterior Dues and interior trim . . . Delightful evidence of luxury in upholstery and appointments . . . PLUS the smoothness of Pontiac's powerful "Six" engine . . . the safety of Four Wheel Brakes and the comfort of Lovejoy Hydrolastic Shock Absorbers.

**4
WHEEL
BRAKES
LOVEJOY
SHOCK
ABSORBERS**

No wonder the New Series Pontiac Six literally leads its field in style and refinement. Prove it all for yourself by a demonstration.

First Annual Baseball Tournament Success

Oyen Team Go On Batting Spree
Overcoming All Opponents

Oyen's first annual baseball tournament held last Monday proved a great success.

In spite of the threatening weather of the morning (which kept two teams from coming) and showers in the afternoon, a good crowd were out to see the local boys bat their team to victory. Four teams competed in the tournament: Sedalia, Chinook, Alaska and Oyen.

In the first game Chinook had an easy victory over Sedalia, winning by a score of 7 to 0.

Rain delayed the second game but when the weather cleared Alaska and Oyen took the field. In the first innings Oyen opened up with a terrific barrage of hits which were responsible for 4 runs before the side was retired. Alaska replied with 2 runs. In the second Oyen got another tally and Alaska tied the score by getting 3 runs. Oyen notched another in the third and 6 in the fifth, their opponents suffering by the one two three route. Oyen 12, Alaska 5.

The final game between Oyen and Chinook provided the sensation of the day. Going to bat first, Oyen players smacked the first five pitched balls on the nose and the score keeper marked up 5 runs. Chinook's first man at bat lashed out a homer with two on ahead of him. The next three batters went out. Chinook scored with 1 run. Oyen failed to trouble the scorer in the second, and Chinook lived things up by registering 3 times. Score at the end of the second: Oyen 5, Chinook 4. From then on, Oyen kept piling (Concluded on page 8.)

PROVINCE OF ALBERTA

DEPARTMENT OF MUNICIPAL AFFAIRS

NOTICE is hereby given that unless all arrears of taxes imposed in respect of any parcel of land situated in Improvement Districts Nos. 212, 213, in the Province of Alberta, are paid on or before the first day of July next, such land will be dealt with under the provisions of this Recovery Act being chapter 122, Revised Statutes of Alberta, 1925, with a view to obtaining Certificate of Title in the name of the Crown in the right of the Province of Alberta in respect to such parcel.

W. D. SPENCE,
Deputy Minister.
Edmonton, May 30th, 1928.

M. D. of Cereal

NOTICE IS HEREBY GIVEN that if all arrears of taxes imposed in 1927 in respect of any parcel of land situated within this municipality are not paid on or before the first day of July next, such land will be dealt with under the provisions of the Tax Recovery Act, 1925, with a view to obtaining certificate of title in the name of the municipality district in respect of such parcel.

T. P. ROBINSON,
Secretary-Treasurer, Municipal District of Corral, No. 242.

Because It Is Farmer Owned

Because it is farmer owned, farmers expect, and they have a right to expect, the highest possible standard of service and treatment at elevators of this farmers' company.

And many farmers tell us that they do get such service and treatment at U.G.G. Elevators.

FIVE REASONS

WHY WHEAT PRODUCERS SHOULD SUPPORT

THE WHEAT POOL

1. Because your self-protection as a producer is incomplete and ineffective if other wheat producers are not exploiting you by monopolizing prices against you.
2. Because co-operation helps to uphold the standard of living by supporting the element of producing in the grain produced by your labor.
3. Because co-operation eliminates unnecessary middlemen and dividend hunting shareholders, who take a heavy toll of the wealth produced by the farm workers.
4. Because the co-operative principle of "each for all, all for each" is the workers' ideal which alone can bring economic and social justice, peace and prosperity to all throughout the world.
5. Because the farm workers ought to concentrate their resources in co-operation instead of supporting capitalistic organizations hostile to co-operative movements.

WOULD REPEAL THE DOMINION ELECTIONS ACT

Ottawa.—Parliament will address itself next session to the amending of the Dominion Elections Act if the report of the committee on privileges and elections is adopted by the House of Commons.

The committee, under the chairmanship of J. J. Deas, Liberal, J. J. Deas, considered their report, the fruit of several weeks of investigation into the Althabasca elections of 1925, where an inquiry by Mr. Justice Clarke, of Edmonton, established that corrupt and illegal practices had taken place.

The committee will recommend to the House that since the report of Mr. Justice Clarke discloses that the cause of the corrupt practices in Althabasca was due to the partisanship, ignorance and incompetency of certain election officials, the committee general should submit to the Department of Justice a full statement of the payments made to the election officials with a view to instituting proceedings for the recovery of the amounts so paid to such officials, if the law provides for such action.

It is also recommended that a special parliamentary committee be appointed next session to examine the evidence and deliberations of the present committee on privileges and elections, to study the Dominion Elections Act and to make recommendations to the method of selecting returning officers and the preparation of voters' lists.

Further, it is urged that the chief electoral officer should recommend to the proper authorities that prosecutions be taken against the election officials of the Dominion Elections Act.

Civil Aviation in Italy

Development Is Rapid and Country Holds Third Place in World

Rome, Italy.—Italy now ranks as the third country in the world for civil aviation. It comes immediately after Germany and France, in the order given, and is ahead of England, which occupies fourth place.

By the end of 1925 Italian air routes with total 2,915 miles over which daily passenger service in either direction will be effected. The whole field of civil aviation in Italy has been developed since 1910. Italy has been developing at such amazing speed that now routes already have been added to the total number of air routes.

Vote Sum For League

Ottawa.—The House passed a vote of \$105,965 for Canada's contribution to the League of Nations. The vote was 105,965 to 10,000. The House also passed a resolution that the Government should do anything in its power to secure the admission of Canada to the League of Nations. The Prime Minister pointed out that before the Government could do anything in this case it would have to settle the whole question of speculation which would be very difficult indeed.

To Aid Mental Hygiene Research

Toronto.—The Laura Spelman Rockefeller Memorial, founded by John D. Rockefeller, has announced its intention to assist mental hygiene research in Canada by the grant to the Canadian National Institute for Mental Hygiene of \$150,000 to be spent during the next five years. This is conditional upon the raising from Canadian sources of an additional \$250,000 during the same period.

Rumor Is Denied

Winnipeg.—Rumors in circulation to the effect that he had been offered the presidency of the University of Alberta were denied by John Bracken, premier of Manitoba. "The rumors are without foundation," he declared.

Complain About Expenses

Ottawa.—Complaints of Canada House were heard in the House when a vote of \$70,000 for contingencies and \$30,000 for salaries for the high commissioner's office in London were under discussion. After considerable debate, the item carried.

Turko-Italian Treaty

Rome.—Premier Mussolini and the Turkish Minister Suid Bey, have signed a five-year bilateral treaty binding Italy and Turkey to neutrality, arbitration and conciliation.

Tornado Near Kansas City

Kansas City, Mo.—A tornado struck Englewood, a suburb between here and Independence, Mo. Two street cars were reported to be overturned. Ambulances were sent to the scene.

Operate On Cost Basis

Alberta Wheat Pool Elevators Adopt New Policy

Calgary.—Wheat Pool elevators in Alberta will be operated on a cost basis from now on. This decision was reached by a full attendance of Pool delegates in convention here.

The new policy laid down will represent something new in co-operative effort in Canada, if not in the world. It means that the members have to be charged only the bare cost of operating the elevator facilities.

When they had their grain into Pool houses no service or elevator fee would be made. At the end of the fiscal year the actual operating cost will be available and will be deducted from the final Wheat Pool payment.

This change in elevator policy was recommended to the delegates by the directors. The proposal was to eliminate handling and service charges upon delivery of the grain to the elevators. The proposal was to operate on a per-bushel basis from the final Wheat Pool payment.

Would Provide Work For Ex-Servicemen

Resolution Favors This As Best Method To Aid Help

London.—The ex-servicemen act at the British Legion conference passed a resolution to the effect that the best tribute that could be paid to Earl Haig would be providing work instead of relief for ex-servicemen.

Lady Haig will present a petition which would have met with the approval of her husband, whose desires would have been, not a status of himself, but that his men should be fought in the war should be helped.

It is understood that the resolution and Lady Haig's petition would be presented to the Government in the form of a national memorial to the late Field Marshal, which the Government is now considering.

British ex-servicemen men will attend the conference of ex-servicemen men, including former members of the House of Commons, which is being held at London next September.

Inspection Satisfactory

Object to Examination Of Immigrants By Canadian Doctors Unaverted

Toronto.—"We have examined every single object that has been raised against the Canadian doctors of assisted passage immigrants and we have not found a single thing that would justify the objection," declared Dr. David Clark, assistant Deputy Minister of the Department of Natural Health, in an interview here.

Articles appearing in certain sections of the British press against the policy of the Canadian doctors conduct examination of immigrants were full of inaccuracies, he said. "The causes of a decrease in immigration to Canada this year," continued Mr. Clark, "lie deeper than the medical inspection policy. One of the causes is the property of immigrants from Britain, he felt, was the feeling of increasing optimism there."

Replace Provisional Police

R.C.M.P. Have Taken Over Work Of Saskatchewan Force

Saskatoon, Sask.—The Saskatchewan Provincial police force passed into the pages of history as the northwest, their activities being taken over by the Royal Canadian Mounted Police. The Saskatchewan sub-division being under the direction of Inspector John Kelly, who transfers from the disbanded force to the mounted riders. Some other members of the S.P.P. will join the R.C.M.P., while the following members of the latter force, who are at the Saskatchewan detachment for some time, will carry on: Sgt. A. Drysdale, Detective Sgt. C. E. Hildyard, and Sgt. J. Threlkeld and P. W. English. The first two have a long service record in the force, dating back to the old Northwest Mounted days.

Inquiry Is Ordered

Ottawa.—The parliamentary immigration inquiry has approved a motion for a return showing all special immigration permits issued from January 1, 1920. The report will show the number of permits, officially termed letters of admission or assurance granted to members of parliament and others.

Appoint Conciliation Board

Ottawa.—A conciliation board has been appointed to investigate the carpenters' strike in Calgary. James H. Gordon will represent the employers, Robert Hewitt, the men. The men are asking for an increase of 12½ cent an hour.

U.S. Honors War Dead

Thousands Attend Memorial Service At Arlington Cemetery, Washington

Washington.—The White Crossed rolling hills of Arlington cemetery were thousands of citizens, soldiers and sailors of the national capital for the annual memorial service, May 30, at the graves of the fallen heroes of all wars.

For the first time since he entered the White House, President Coolidge led the nation in memorial day exercises outside of Washington. His annual tribute was paid in an address near the spot where Abraham Lincoln made his immortal address in Gettysburg, Penn.

Practically the entire day was set aside for services arranged by patriotic and veterans organizations. A feature was a parade of veterans of all wars through the downtown streets and over to Arlington.

Sir Esmé Howard, British Ambassador, and Gen. Victor H. Doring, Canadian minister, took part in the exercises in Arlington cemetery, where they decorated the graves and the Cross of Sacrifice erected by the Canadian Government in memory of Americans who died while serving as members of the Canadian corps.

POOR SALARIES PAID SCIENTIFIC AGRICULTURISTS

Ottawa.—A motion to go into supply in the House of Commons prompted C. G. Coote, U.F.A., Milled, to protest that salaries paid to men in the scientific and technical departments of the department of agriculture were inadequate.

Mr. Coote declared that the department of agriculture was losing the professional men because of the low salaries which were paid. He gave a comparison between salaries paid in the United States service and in the Canadian to illustrate the fact that Canada paid much less than the U.S.

The professional service of Canada said Mr. Coote, must compete with that of the U.S. for men. As things now stood many Canadians went to the U.S. to take post-graduate university courses. Frequently they remained there because of the fact they could obtain more money in that country.

Mr. Coote compared salaries paid in the cereal division of agriculture with those paid in the geological survey. The figures he quoted showed that the salaries in the cereal division were lower. Canada could not afford to lose her scientific agricultural men, he declared. Agriculture was Canada's basic industry and wheat growing was the most important phase of that industry.

J. S. Steedman, Liberal-Progressive, Souris, declared the question of the salaries paid to scientific agricultural men was one of the most important matters which had come before the house this session. It should be realized that the property of Canada depended largely on her agriculture, yet the ravages of disease were spreading in certain quarters of agricultural Canada, and it was of prime importance to the Dominion as a whole that adequate salaries be paid our scientific agriculturalists so that their research efforts could be used for the benefit of agriculture in this country.

It is believed here that Dr. Young contracted the disease in the course of his researches with Noguchi. Young was of Scotch descent and had a long experience with tropical diseases. In 1924 at the comparatively early age of 35 he was appointed to his present position.

Noted Doctor Is Latest Victim Of Scientific Research

London.—News was received here of the death of Dr. William Alexander Young, director of the Cold Coast Colony, Africa. Dr. Young was a co-worker with Dr. Hideyo Noguchi, who died recently at Accra, of yellow fever, resulting from his researches into the origin of that disease.

It is believed here that Dr. Young contracted the disease in the course of his researches with Noguchi. Young was of Scotch descent and had a long experience with tropical diseases. In 1924 at the comparatively early age of 35 he was appointed to his present position.

At the same time he demanded less indifference to crime in the U.S. and condemned what was described as a tendency of the legislatures to excuse the powers granted to them by their constitution. These things, he said, tended to weaken the regime of law and breed turbulent populations prone to revolt.

Declaring the "one thing we want above all else for ourselves and for other nations is a continuance of peace," Mr. Coolidge reviewed negotiations by the state department for treaties against war and for arbitration treaties.

The Briand proposal that the United States and France sign a treaty to renounce war was described by the President as having developed into "one of the most impressive peace movements that the world has ever seen."

"It is my earnest hope that success may crown the negotiations now in progress and that the ideas which have been inspired by the French minister of foreign affairs and the secretary of state of the U.S. in their joint efforts for peace, may find a solution of the problem of peace."

May Receive Appointment

The possibility that a Canadian judge will take the place on the permanent court of international justice of The Hague left vacant by the resignation of John Bassett Moore, of the United States, is now openly acknowledged in well-informed circles at Washington. Already, it appears, the name of Mr. Justice Riddell, of Toronto (above), as well-known all over the world, is being mentioned as a likely successor to the American jurist.

The bill met stormy opposition in the Commons. It was discussed at some length by the Senate recently in committee of the whole. Eventually Senator Laurier moved that the committee rise. This was carried by 38 to 20. The effect was to kill the bill.

Senator Dunshearn, Government leader, expressed the measure, which he said would simplify procedure and prevent abuses. The state department had a well-trained staff to handle the work. Experience had shown that court inquiries on naturalization were absolutely useless.

Record During March

For Canadian Roads

Railways Carry More Freight Than In Any Previous March

Ottawa.—The Canadian railways carried more freight during March, 1928, than in any previous March. Gross revenues also were the largest earned yet, exceeding those of March, last year, by \$2,153,476, or 53 per cent. Although operating expenses were heavier than in 1927 by \$1,292,220, or 3.9 per cent, net revenues were larger by \$883,259.

The large carry-over of grain has been an important factor in the heavy traffic and earnings of the railways during the first quarter of 1928, the movement of grain to the Pacific ports being particularly heavy. The March payroll was heavier than in 1927 by \$1,037,133, and the average number of employees increased by 3,022.

The Canadian National Railways showed gross revenue, compared with March, 1927, was \$736,717, or 4.5 per cent, for an increase in freight of four per cent, and a decrease in passenger traffic of 6.3 per cent.

The Canadian Pacific Railway showed gross revenue for March heavier than 1927 by \$1,353,348, or 8.8 per cent. Passenger and express revenues showed decreases but all other revenues were larger, freight by 12.5 per cent.

The Canadian Pacific Railway showed gross revenue for March heavier than 1927 by \$1,353,348, or 8.8 per cent. Passenger and express revenues showed decreases but all other revenues were larger, freight by 12.5 per cent.

FLAG QUESTION CAUSE OF RIOTING AT CAPETOWN

Capetown, South Africa.—Reinforcements of police from all parts of the peninsula were drafted into Capetown to cope with the threatening situation which developed when a demonstration, said to have been inspired by unrest among colored voters, resulted in the celebration of the 15th anniversary of the establishment of the Union of South Africa.

The celebration was historic because for the first time the new national flag was flown along with the Union Jack, and Premier J. B. M. Hertzog and General Jan Christian Smuts, former premier and present leader of the opposition, appeared on the same platform and delivered patriotic speeches.

Scenes witnessed were re-enacted when excited crowds of thousands and several ugly incidents occurred. Colored people were prominent in the demonstration and automobile carrying miniatures of the New Union flag were partially wrecked, but vehicles which carried miniatures of the Union Jack were not touched.

The police were forced to charge the mobs several times. A dozen persons were injured, which had flowers on the people were injured, while 90 persons were arrested.

In his address at the celebration Premier Hertzog said the new flag was a "lasting symbol of the independent existence of the power and authority of the South African nation."

Referring to the flying of the new Union flag alongside the Union Jack, General Smuts declared the two emblems entwined symbolized the equality of the races and the indivisible unity of the South African nation. He said the flag was a symbol of the emities and struggles of the past.

In Old Quebec

Quaint Part Of Dominion Where Modern Commerce and Ancient Customs Unite

On the banks of the Richelieu, one of the largest of the tributaries of the St. Lawrence, is a busy modern town where past history and present commerce link Canada and the United States. This is the city of Quebec, which gives its name to a new map sheet of the National Topographic Series issued by the Topographical Survey of the Department of the Interior, on a scale of one mile to the inch.

Sorel, now noted for its shipbuilding yards, was for a long time the summer residence of the Governors of Canada. Here too stood old Fort Richelieu, now commemorated by a cairn, tablet, and fence. This fort, first raised in 1672, was rebuilt in 1685 by Captain Pierre de Sorel, a French engineer, under orders from the Marquis de Tracy. Leading to it was the waterway from the English colonies to the sea, and it was the highway for the export to the United States of bay on the low lying marshy islands of the St. Lawrence in front of Sorel, and also of pulp wood.

The Sorel map sheet is pleasing to the eye, and its features are sharply defined in various colors. The routes of the north and south shore Montreal-Quebec highways are shown in red as they are cut out by secondary thoroughfares blocked in yellow. Many of these least travelled roads into the Laurentides. These are the well-known paths of the pleasure-seeker, the hunter and the fisherman. Good roads are outlined in black, crossing the country in every direction. Bordering them are the uniformly ribbon-like farms of Quebec. White-washed dwellings, and the houses which are also shown on the map lend picturesque to an otherwise rather flat landscape, occasionally relieved by patches of heavy woods and thinner wooded areas.

The town of Berthier across the St. Lawrence from Sorel is part of an old seigneurial grant to the Sieur de Randan on the 29th of October, 1672, and from him acquired by Alexandre Berthier, an officer of the Carignan regiment. A relic of seigneurial times survives in the Commune de Berthier. The town of Sorel, which still claims pasture privileges for its stock, partly in ruins, but still standing on the Berthier seignior, is one of the oldest Protestant Churches in the province. A forest nursery, in connection with which is a forest ranger's school, is located in the vicinity of the town.

Famed for having the largest lime factory in the world, Joliette is situated on the Riviere L'Assomption. The city was named after the explorer, Louis Joliette. Commercially it is also important as a manufacturing centre for tobacco, paper and lumber.

Along the St. Lawrence here and there are stone houses with thatched roofs, while nestling villages group around a church and rectory vary the scenery inland.

The Sorel sheet is obtained from the Survey General Department of the Interior, Ottawa, upon application and payment of twenty-five cents. The map may also be had on linen back or in folder cover in either English or French for fifty cents.

Indignant Householder (holding up a dead cat): Here, constable, look what I found in my garden. What are you going to do about it?

Constable: Well, you know the law, my man. If it ain't claimed in six months, it's yours!

Indignant Man: "Give me a champagne."

Barber: "Sorry, but I'm just out of facial soap sir."

Balaia gump from the milky glue of the balata tree is used in making rubber belting.

My husband only married me for my money."

"Then he is not so stupid as he looks."—Vergil's Italian, Munich.

REASON SASKATCHEWAN IMPORTS POTATOES

Home Grown Product Below Average Grade Say Dealers

It seems difficult to credit a fertile province like Saskatchewan that does upon dozens of carloads of potatoes imported during a year. This does not happen because Saskatchewan does not produce sufficient for her own needs, but because farmers and merchants do not view with favor the average run of the home grown product. We have it from those who buy them and from Dominion agricultural inspectors, that the Saskatchewan farmer has not yet learned the way to market potatoes.

During the past year forty-one cars of potatoes were consumed in the city of Regina alone and of these ten cars only were purchased in the province, the remainder coming from Manitoba, Alberta and British Columbia. It is stated that the "Chinook" of British Columbia can be depended upon to put up uniform carloads of potatoes; each bag of 100 pounds is tagged and the bags are all, in the content of a car, strictly graded "Canada I" can be ordered from British Columbia and the buyer can depend upon his order being filled. On the other hand, a carload of Saskatchewan potatoes, such as we ourselves have seen unloaded in Regina, may be described as "non-uniform," reds and whites, small and large bags, and a tag that may with impunity be deciphered.

While we should aspire to the production of "A" class potatoes, the grade known as "Canada I" is easily within reach of any grower interested in raising potatoes and is as follows: "Canada B quality, which shall include only the best of the best potatoes of similar varietal characteristics which are practically free from dirt or other foreign matter, frost injury, rot, and which are free from serious damage caused by sunburn, cuts, scab, blight, dry rot or other causes. The diameter of potatoes of this grade shall not be less than one and one-half inches."

Our agricultural societies could, no doubt, realize that this is the standard—it is a matter of good seed, careful production, and improved marketing methods and in this latter sphere, the Marketing Department of Agriculture, through the Co-operation and Markets Branch, would assist. At the present time, however, the province may have their own association or their own pool, but just now, the Marketing Department would be put forth to place a saleable product on the market.—Moose Jaw Times

Using Our Spare Time

People Have Not Yet Learned the Best Method

The fact there is considerable unemployment during prosperous times means simply that the present methods of working we have earned more time for play, but have not yet learned how to use it. When three-fourths of the people can do all the work that needs to be done in the country, it means that all of the people are in position to spend one-fourth less than they once did, but the leisure isn't divided up evenly. Some are "out of work," some do so little that they might be classed among the idle, and others are still determined to work from sun to sun. The human element just will keep conditions from being perfect. We people are in better shape to be happy than ever before, if we only had a manager to tell us how to go about it.

A Synthetic Diet

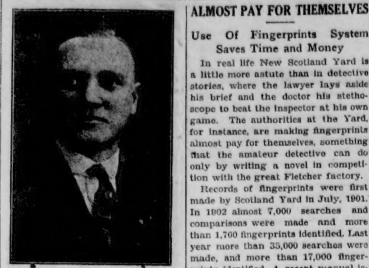

Sir Alfred Mond prophesies that one day synthetic food and drink will be made by chemists in factories. There will be no need to till the soil, to breed cattle, to rear hogs, to distill whisky, or to import wine. We will breakfast on tablets and dine on pills. Already synthetic vitamins are being prescribed by doctors in the form of pills. We can chew sunlight and manufacture sunshine. But we shudder at the prospect of a laboratory race men. A synthetic diet is fit only for robots.

The Beauty Of Red Pine

The red pine is one of the most beautiful trees in Canada for ornamental planting. Its great masses of long dark-green, closely bunched needles contrast strikingly with the reddish colour of the bark in its straight rugged trunk. It is a splendid tree for drives, borders, and lawns of large grounds.

The royal scepter of Great Britain contains the largest cut diamond in the world.

Lady: "Is this milk fresh?" Milkman: "Art as how ago maddam. It was gram."

NORMAN P. NORTH,
Superintendent of the Canadian National Railways, Hornsby, who became Superintendent at Fort Arthur on May 1.

Tailing the Lambs

Operation Should Be Performed At the Age of Eight or Ten Days

It is not unusual to find amongst the members of "Boys" and "Girls" Sheep Clubs an aversion towards the seeming cruelty of removing the tails of the young lambs, with the result that the tailing process is put off for perhaps a month after it should be done. By this time the tails have grown stout and the lambs more difficult to handle, and when the operation has finally to be undertaken the surgery assumes a more troublesome aspect. At a shearing contest jointly by the Federal and Provincial Department of Agriculture for the "Middlesex County Boys" and "Girls" Sheep Clubs, the lambs of the flock were used for a tailing and wetting demonstration. The operations were there or thereabouts overdone and provided an impressive lesson on the importance of removing these appendages at the proper age. The older lambs had to have their tails tightly closed close to the body to prevent bleeding, and when released after the operation many of them showed evidence of shock and illness. The cords were to be removed the following morning when danger of bleeding would have passed, and the young sheep had to be treated for a few days to hasten the healing process. The lesson decided many of the young shepherds to do the necessary surgery at the age of eight or ten days, when the tail is slender, bleeds very little when removed, and gives the lamb very little shock.

Assets Of Universities

Four Western Canada Universities Have Assets Valued At \$15,295,875

The total assets of the 23 universities placed at \$57,077,029. Nearly one-third of this total is held by McGill University, Montreal, founded in 1821. McGill's assets are given as \$28,124,558 of which \$18,749,568 are in investments and \$9,383,570 in lands, buildings and equipment. The four universities in Western Canada have total assets valued at \$15,295,875. While about 28 per cent. of the 42,546 students attending the 23 Canadian universities are women, only about nine per cent. or 392,616 of the 4,263 professors on the teaching staffs are of the fair sex.

Brown: "Yes I have met your wife. In fact, I knew her before you married her."

Jones: "Ah, that's where you had the advantage of me—I didn't!"

102,000 Play "Langara"

The Arctic Circle is the only place in the world exempt from lightning and thunder.

Ireland's new postal cards are printed in both Irish and English.

Walter Hagin, professional champion, against the world's best amateur, won the match against him professional and amateur.

Over eleven thousand players have toured the new Canadian Pacific Railway Company's Golf Course "Langara," at South Vancouver, British Columbia, since the first of March. It was announced by E. S. McCadden, the manager of the Club, who states that from January 1st to March 31st, no less than 11,543 persons have played over the course. Every day, Mr. McCadden states, this all weather golf course, with its well watered and broad fairways and its super-sized bent-grass greens, gains in popularity, and since July 1, 1928, when "Langara" was thrown open for public play, approximately 102,000 have played the course.

"Langara," which is the home of the "Glen Cairn" Club, has been in the Inter-Club Competition last year—has been played over by most

The Club House of the famous golf course is the scene of the leading Pacific Coast professionals, including the inimitable Walter Hagin, three years running professional champion of the U.S.A., who rates the course in the first flight.

On it was played last year the first Pacific Coast Newspaperman's Golf Tournament, which was held at Vancouver. The attendance exceeded 50, and competitors came from as far south as Los Angeles. Langara is 3,400 yards in length and has a par of 72.

ALMOST PAY FOR THEMSELVES

Use Of Fingerprints System Saves Time and Money

In real life, New Scotland Yard is a little more astute than its detective stories, where the lawyer lays aside his brief and the doctor his stethoscope to beat the inspector at his own game. The authorities at the Yard, for instance, are making fingerprints almost pay for themselves, something that the amateur detective can do only by writing a novel in competition with the great Fletcher Mystery. Second of five fingerprints were first made by Scotland Yard in July, 1901. In 1902 almost 7,000 searches and comparisons were made and more than 1,700 fingerprints identified. Last year more than 25,000 searches were made, and more than 17,000 fingerprints identified. A recent national inquiry by Scotland Yard goes on to say:

"The number of recognitions effected is not the only test by which the advantages of the system can be estimated. It has brought about a marked saving of time of police officers. On a moderate computation the money value of the saving thus effected covers the cost of the establishment for working the method and all the expenses of the system. Scotland Yard now has on its 220,000 fingerprint slips. The slips of men known to be dead and the slips of men believed to be too old to commit further crimes, are being removed from the collection. The English police expect the collection to reach its greatest size for purposes of official identification within the next few years and thereafter to remain about the same level. When that time comes it will mean that the fingerprint system has been completely assimilated and is no longer a newcomer or an appreciated helper of the police."

Station Within Arctic Circle

Murmansk, Russia, Is Most Northerly Spot Reached by Railroad

Polynaryl Krug, which is situated for polar circle, is on latitude 66 degrees 55 minutes north. Just where the Arctic begins. That is why it is the name of a railroad station. This railroad had to be across the Arctic circle somewhere, which gave the definite location for a station, now grown to a village of two log houses and a larger structure, also a log, which holds the co-operative stores and rooms upstairs for the manager's family.

One place seems as good as another for stations in the wilderness waste of tundra and scrub pine. This is one where name and place were predetermined. If not historical, it has geographical fame—in fact, world distinction. There cannot be more than one other, possibly in Sweden, in the Arctic circle with railroad service. Also each of its ten inhabitants can tell just where he lives in parlance of degrees and minutes. Perhaps more than that in cities figured in millions can say as much.

More stations, an average of one for every nine miles, stretch along log houses half buried in snow, an occasional hand-dug family with a residential team which has come for supplies from the blazer waste beyond—follow until Murmansk is reached, 147 miles within the Arctic circle and the world's northernmost, approached by railroad. Murmansk is latitude 68 degrees, 50 minutes, only 14 miles south of Point Barrow, Alaska, the farthest north of the United States.

A new harbor is being built in Murmansk for in a future red sea it may be useful as a base for naval operations.

Youth Not Happiest Age

Peace Of Mind Comes With Acceptance Of Facts Of Life

The young men of the world in our sentimental moments, do not think we would like to have time turn backward in its flight and make us boys and girls again. Eugene Field, writing, carrying with him the spirit of youth to the day of his death, wrote:

"I'd like to sleep where I used to be when I was a boy—a little boy."

We forget that when we were children we were not what we are now. We think we were. The sorrows of childhood are exceedingly real. The sorrows and anxieties of boyhood and girlhood were as unchangeable and devastating as the future. Looking backward, life seems like a long summer afternoon in the golden glow of youth. But it wasn't. With consciousness and mind at rest with the consciousness of work done as well as we know how, the chance for happiness today is as good as any of us as it was in childhood.

Age is the happiest period of all. Age when it follows a period of adult life, is freer from worries and anxieties than any other period. The first part of life is a long summer afternoon. The falling of illusions need not mean loss of faith, and cynicism. Neither age may bring merely a clearer, more honest acceptance of the facts of life. And that is always the way to peace of mind.

Do not fear age. Look forward to it with comfort.—Grove Patterson to the Editor.

Value Of Farm Production

In Three Western Provinces Placed At \$8,253

The total value of the farm production in Manitoba, Saskatchewan and Alberta in 1927 according to a recent compilation is placed at \$802,565,044, an average of \$10,281.27 per acre. The average value per farm of \$5,223. Agricultural products in these three provinces marketed last year had a value of \$612,666,000, an average of \$10,281.27 per acre. The average value per farm of \$5,223. Agricultural products in these three provinces marketed last year had a value of \$612,666,000, an average of \$10,281.27 per acre. The average value per farm of \$5,223. Agricultural products in these three provinces marketed last year had a value of \$612,666,000, an average of \$10,281.27 per acre.

By 1931 the value of farm production in 1927 is given as: Saskatchewan, \$346,180,220; Alberta, \$221,588,270; Manitoba, \$134,805,180.

Hungary is to have a college for policemen. The course will be four years. For entrance a high school education will be necessary.

Don't think because it's better late than never that it isn't better never late.

Culture of the West

Hon. William Phillips Is Impressed With Conditions In Western Canada

The United States Minister at Ottawa has made a tour of Western Canada, and, like most men who have visited that half of the Dominion with their eyes wide open, he came back profoundly impressed with the evidence of progress and of the spirit of optimism he found there. Four months ago he had seen the material development of the Prairie Provinces and British Columbia since passed over thirty years ago when he was no doubt prepared, but the transformation in that respect appears to have been beyond his expectations. What he seems not to have looked for is the advanced culture of the West. In education, in applied science, in arts and letters, in the general cultivation of taste, and in all that makes for the refinement of life, the Canadian West has at least kept pace with its onward march as wealth producer, and has been much inclined to take it for granted that a young community, striving to make a high level of record yield of the products of the soil, and expanding the volume of diversified trade and industry, is too intent upon money-making to spare time for matters of a higher strain. The Canadian West has not been neglected of the graces and of the things of the spirit. The writer of Western Canada is a fostering nurse of the humanities. It is to the season in which the West is to be a more than an able extent surplanted and people accepted their place on their hands. Those who also have pecuniary means to enjoy the works of the great writers and the great composers, and the performances of the best actors, and can meet together in charming social intercourse. Mr. Phillips found Western Canada to be a country of open-hearted, hospitable people, among whom culture has reached a high level and is spreading more and more. He will be able to tell his fellow-countrymen that our prairie country is no wild and woolly west, but is the seat of a fine people. Toronto Mail and Empire.

Telephone and Telegraph

Exchange Of Facilities Is Under Consideration In Alberta

Ways and means for working out an exchange of facilities between the Alberta Government and the C.N.T. and telegraph companies are at present under consideration and a conference in connection with the matter will be held recently between W. D. Robb, vice-president of the Canadian National Railways, and R. B. Turner, deputy minister of telephones. Mr. Robb is referring the question to the head office of the C.N.T. telegraphs and it is likely that a working agreement will be reached.

Under the proposed plan the wires of the provincial telephone system will be made use of by the telegraph company. In certain parts of the province, for the transmission of telegraphic messages, while the privilege using telegraph lines for telephoning telephone lines will be accorded in other cases, by way of exchange. A similar arrangement in some parts of the province is already working between the telephone service and the C.P.T. telegraphs.

Just Select Samples

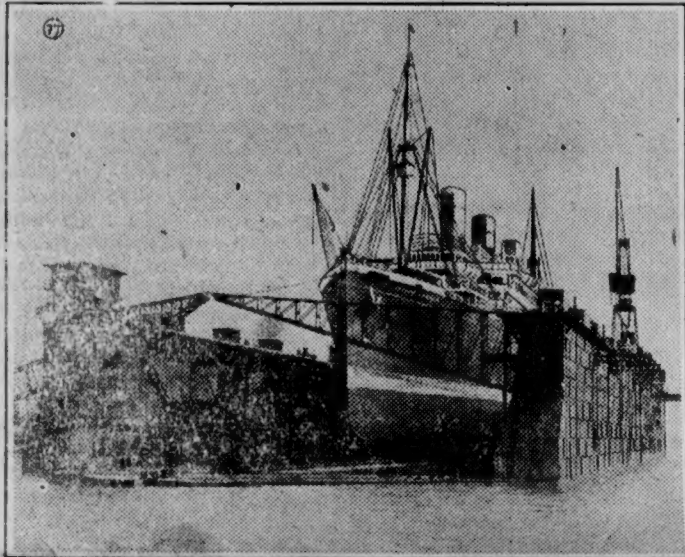

Farmer John Giles sent his youngest son onto the miller's with a sample of his crop of wheat. "This is splendid wheat young man," he murmured to the farmer's son. "I'd like to buy it from your father. How much has he got like this, do you think?" "Not much," said the boy, "he brought all the morning, picking that out."

Grain Shipments To Vancouver

About 125,000 bushels of grain have been shipped via Calgary to Vancouver since the beginning of the 1927 crop season, and no suggestion has been made to increase the quantity shipped in the corresponding period of the preceding season and is some part of the grain is to be shipped by rail to Vancouver for the previous record.

The Cave Dwellers: "If all goes well, we will have a lift put in next year."—Guerin Macdonald, Illinois.

TWO GIANTS OF SHIPPING CIRCLES

The Canadian Pacific liner "Empress of Australia" is seen in the huge floating drydock at Southampton, England, where she was placed for inspection after her South America-Africa cruise. This dock bears the reputation of being the largest of its kind in the world with a length over all of 960 feet, width at the point of entrance being 134 feet and the depth of water over the keel blocks is 38 feet.

NOTICE TO CREDITORS OF FIRST MEETING WHERE RECEIVING ORDER OR ASSIGNMENT MADE

THE BANKRUPTCY ACT

In the estate of Alfred Edward Cooksley, Esther, Alberta, authorised assignor (or bankrupt).

Notice is hereby given that A. E. Cooksley of Esther, Alberta, did on the 6th day of June, 1928 make an authorized assignment of all his property for the benefit of his creditors, and that Laurence J. Clarke, Official Receiver has appointed me to be custodian of the estate of the debtor until the first meeting of creditors.

Notice is further given that the first meeting of creditors in the above estate will be held in the Court House, Calgary, on the 14th day of June, 1928, at 10 o'clock in the fore noon.

To enable you to vote thereat, proof of your claim must be lodged with me before the meeting is held.

Proxies to be used at the meeting must be lodged with me prior thereto.

And further take notice that at such meeting the creditors will elect the permanent trustee.

And further take notice that if you have any claim against the debtor for which you are entitled to rank, proof of such claim must be filed with me, or with the trustee when appointed; otherwise the proceeds of the debtor's estate will be distributed among the parties entitled thereto without regard to your claim.

Dated at Calgary this 6th day of June, 1928.

W. LOREE, Custodian,
Land Titles Building,
Calgary, Alberta.

TENDERS WANTED

Tenders for labor in construction of concrete on east side of Main Street from Railway Avenue to First Avenue will be received by the undersigned who will furnish specifications.

The lowest or any tender not necessarily accepted.

Tenders to be submitted by 6 p.m. June 15, 1928.

F. C. BLISS,
Secretary-Treasurer,
Village of Oyen.

FOR SALE—House and lot on Second Avenue East, Oyen. Apply to L. Smart, Delia, Alta.

Railways and Aircraft Companies In United States Join Hands To Supply Transcontinental Service

This aviation generation will probably not be able to annihilate space, but it is certainly destroying distance. Air lines to the other planets and the nearer stars are not yet in sight, but the stretches of the earth are being turned into aerial taxi jaunts. Also, as man's habit when it is determined to cover great distances in brief time, the earlier hardships of swift travel are being eliminated. The latest combination of speed with comfort is announced in the formation of the "plane-train service to Los Angeles from New York and return."

It has not yet been begun, but the personnel of its sponsorship assures its early establishment. Within a few weeks it will be possible to reach Los Angeles in forty-eight hours from New York, with two nights of sleep aboard a Pullman. Two railroads—the Pennsylvania and the Atchafalaya, Toledo and Santa Fe—the two leading aircraft companies—Curtiss and Wright—and many strong banking houses have combined in the project. Capital stock up to \$500,000 has been subscribed with no public offering, and the company is about to publish its rates, its time schedules and the names of its public officers. The planes, which will carry transcontinental passengers during the daylight hours, have a capacity of fourteen persons each; meals will be served in the air as on the Pullmans; and the tourists will be in their hotels at Los Angeles or New York before the light fades on the second day. It is part of the new miracle wrought by the union of science and finance, with "planes and railroads acting as auxiliaries instead of rivals. Passage by air has become a conventional daily affair in Europe, where generally the scope of man's business interests requires a journey only from one country to another and without the handicap of such distances as we have here. To meet the spread of this new mode of travel, a new combination has been devised by men equally responsible for management and for transportation. It may be only the beginning of an entirely new system of general travel in this country.

Prior to the moon will probably have to be left to succeeding generations, which will have left only interstellar spaces as their objective. But news like this about the train-plane alliance should ordinary citizens to expect a time when their vehicles, Pullman cars by night will take wings by day and, rising from the tracks, carry them through the air until night comes again—New York Times.

Beef Cattle Market

Good Prices Are Secured For Prime Beef

J. T. McCallum, of Melita, Manitoba, last month sold 24 head of prime beef grade shorthorn and Hereford steers at prices ranging from \$10.50 to \$12. per hundred pounds to a Winnipeg buyer. "The same buyer purchased 10 Aberdeen Angus steers from George Tall, a well known breeder, of Warren, Manitoba, for \$12.50 per hundred weight. These steers dressed 62.5 per cent. They were purchased last October for \$7.50 per hundredweight. At that time they weighed 1,010 pounds, which had increased on farm growth feed to 1,308 pounds at time of slaughter. The grand champion car lot at the Calgary and Edmonton spring shows was sold at \$10. per hundredweight. They were Herefords and were raised by W. P. Fleming, of Calgary.

Kind Old Gent: How old are you, my little man?
Small Boy (tensely): Eight.
"And what are you going to be?"
"Nine."

"R.O.P." Copyrighted

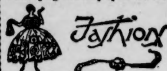

Title For Policy Of Record Of Performance Poultry Is To Be Protected

The Department of Agriculture announces that the term "R.O.P.," the popular title for the policy of the Record of Performance for Poultry, has been copyrighted by the Dominion Live Stock Branch, from which the office the policy is administered. The purpose of copyrighting is to prevent the fraudulent use of the term in advertising. The widespread popularity and demand for Record of Performance poultry have made the move necessary for the protection of farmers and poultrymen desiring to secure R.O.P. stock.

Many commercial hatcheries are using R.O.P. males to head the flocks from which they secure eggs, and while the Department is encouraging this practice, it also intends to insure that genuine R.O.P. stock is so used and advertised.

Definitions are at present being drafted defining the various classes of R.O.P. stock—females, males, chicks, pens, etc. These will be made public when adopted, and will be the official definitions under the Dominion Live Stock Branch through the copyright.

Winnipeg Newspaper Union

The annual report of the Superintendent of Penitentiaries states there were 2,480 inmates at the close of 1927. Of these, 1,347 were born in British countries, and 633 in foreign countries. In detail it is stated that 1,540 were born in the United States, 1,440 in England and Wales, 40 in Ireland, 61 in Scotland and 29 in other British countries. Of the 633 foreign-born 209 were born in Canada, but their antecedents are not given. As 62 per cent. of the penitentiary inmates were born in Canada, we should not blame foreigners unduly for the increase of crime.

POPULAR BRIDE-ELECT

Miss Margaret Fleming, of Ottawa, arrived in Quebec recently aboard the "Aurora," en route to Ottawa, where she is soon to wed Viscount Hardinge, A.D.C. to his excellency the Governor-General.

Not Always To Blame

Increase Of Crime Not Altogether Due To Foreigners

The annual report of the Superintendent of Penitentiaries states there were 2,480 inmates at the close of 1927. Of these, 1,347 were born in British countries, and 633 in foreign countries. In detail it is stated that 1,540 were born in the United States, 1,440 in England and Wales, 40 in Ireland, 61 in Scotland and 29 in other British countries. Building Elevators Happily

A new grain elevator every two days has been the record established by the Manitoba Wheat Pool since building operations began this spring. Close to eighty new elevator projects have been organized this year, and new elevators will be erected at nearly all of them. In building these Manitoba Wheat Pool elevators over three hundred men divided into fourteen crews are employed.

Ultra Violet Rays

Benefit To Poultry

Effects Greatly Increase Egg Production Says Vancouver Man

News dispatches from the East a few days ago told of the experiments being carried on by a university professor in studying the effects of ultra violet rays on poultry.

There is nothing new in this for Herbert Trafton, Vancouver poultry man, who has been using ultra violet rays in his hatcheries for months. Unlike the Eastern professor, however, Mr. Trafton has not yet attempted to control the sex of offspring for hatching. He may carry on some experiments in that direction later.

"You can't use too much rays of course, but when properly controlled it will work wonders with poultry," said Mr. Trafton. "It has increased egg production tremendously. Some of my hens that had been laying two or three eggs a week evidently with the idea that that was enough have, under the influence of ultra violet rays, taken a new outlook on life and laid eggs daily for eight or nine days at a stretch. Another advantage is the use of the rays is that it brings out the sex characteristics in chicks much earlier. And another thing: The rays are sure death to all parasites affecting poultry and in that way accomplish a great deal towards improving the health standards of the stock."

Farm Girls Win Prizes

Fifteenth Annual Farm Girls Rally At University Of Saskatchewan

Prizes for the various judging competitions held in connection with the 15th annual farm girls' rally at the University of Saskatchewan recently were presented at the closing entertainment of the conference at Saskatoon.

Margaret Quilty and Margaret Gordis, comprising the Wilcox team, won the grand aggregate prize, the Saskatoon exhibition board cup, which will be held for one year. Each girl also received books from the university. Mary Duke, of Kennedy, was the individual winner.

Dairy products—Weyburn team; Ruth Peterson and Betty Pettit; individual, Ruth Peterson.

Bread—Kennedy team; Mary Duke and Alice Thibault; individual, Verity Day, Mossbank.

Poultry—Wilcox team; Margaret Quilty and Margaret Gordis, individual, Mary Baptiste, Lacrosse.

This year 120 girls entered the competitions.

A Toronto controller wants to know if there is any difference between stealing a dollar and stealing a million dollars. There is the trifling difference that one crime usually involves a term in jail.

A conspicuous sign displayed on a

The most extensive, interesting and readily accessible field for alpine climbers today is found in the Canadian Rockies, particularly the portions included in the national parks of Canada.

English Visitor Sees Excellent Prospects For the Growth Of Sheep Industry In Canada

A bright future for the Canadian sheep industry is painted by H. B. Hollings, editor of The Wool Record, of Bradford, the wool-mastering centre of England. Mr. Hollings visited this country in 1927.

"As I travelled through Ontario, Manitoba, Alberta and Saskatchewan, I could not help asking: 'Where are the sheep?' he writes Mr. Hollings. 'Apart from passing a small flock or two on the train I had little opportunity of seeing them.'"

"It was too early to see any of the new clip, much as I desired to do so. The wool I saw was specially suitable for hosiery manufacture. This will always be a big industry in Canada, the climate making warm underclothes essential. The mills are eventually getting their best with the material available, and I was pleased to see that farmers are keeping a suitable type of sheep. I should say that the bulk of the wool raised in 1927 to 56's quality. I was asked if I thought manufacturing needs are such that the Canadian sheep industry should be increased to 25,000,000, and unhesitatingly replied in the affirmative."

"I have never known a time in the history of the wool trade when the outlook for sheep men was so encouraging. I am not among those who unduly lower their prices. Mutton values are high, and I think the value of the farm produce has fallen in value in England during the past two or three years. Those who have kept sheep have found both mutton and wool to sell well. I would appeal to every Canadian farmer to keep mutton sheep as possible, because I think it will pay him to do so. Since returning home I have given three lectures on the work in Alberta as well as on every other possible occasion. I have endeavored to emphasize the opportunities in Canada, and I am sure that sufficient stock and enterprise."

"One of the most satisfactory things that my trip was that I met so many Yorkshiremen who had gone out to Canada and made a success of their sheep raising which they had feared. Sometimes discouraging comments are made upon industry in the Dominion of Canada."

"If Canada is to fill its place in the Empire it needs men of the same type to extend its pasture and agricultural interests. Quite a large number of Englishmen with a good knowledge of the sheep and mutton industry have settled in Canada, and these should be able to give some good advice, particularly after they have lived long enough in Canada to become acquainted with its climatic peculiarities."

"When I started out in the world I had but a dollar.
"What did you do with that?"
"Wired home for more money."

Plate Glass Plant For Frank Williams
It is announced by Frank Spence, M.L.A. for Fort William, that the Feldspar Glass Company, of Oshawa, Ontario, is negotiating to take over the plant and equipment of the Canada Steel Co., located on the Kaministiquia River, with both rail and ship facilities at hand. The new industry is expected to give employment to about a hundred workmen.

When I started out in the world I had but a dollar.
"What did you do with that?"
"Wired home for more money."

Farmers' Profitable Venture

Farmers Of Manitoba Own Creamery Valued At \$90,000

Since the Manitoba Co-operative Dairies, Ltd., Winnipeg, began operations in 1921, it has returned to its farmer patrons in interest and bonuses in cash or credit, nearly \$75,000, according to a recent report by the management. During the same time the members of the association have subscribed and paid for capital stock in the organization to the amount of \$77,202. Thus the farmers of Manitoba now own this creamery and its equipment, valued at \$90,000, and have received refunds practically covering their investment. As the Manitoba creamery now owns the creamery and its equipment, valued at \$90,000, and have received refunds practically covering their investment. As the Manitoba creamery now owns the creamery and its equipment, valued at \$90,000, and have received refunds practically covering their investment. WORLD HAPPENINGS
BRIEFLY TOLD

Premier King, replying to a question in the House, said the Government had no intention of establishing legations at Buenos Aires and Mexico City.

Partial prohibition has been decreed in Tabasco, Mexico, by the State Government. An order was issued making it unlawful to sell any alcoholic drink except beer and cider.

There will be no Canadian cadets sent to the Junior Blaisy rifle meet this year, it has been announced. Word has been received that a team would have to pay its own expenses.

Three delegates from Soviet Russia will attend the International Wheat Pool conference to be held in Regina on June 5 to 7 inclusive, according to word received by C. P. Burnell, chairman of the International Conference Committee.

Gerald T. Evans, of Vancouver, B.C., won the Sutherland gold medal in biochemistry. It was announced at McGill University, when the second year results in the Faculty of Medicine were posted.

A master of fact statement in the official Turkish newspaper Milliet says that the Ankara Government has passed a law forbidding the importation and use of calculating machines in Turkey under severe penalties.

E. S. Hertley, cable engineer, has gone to Victoria, B.C. He is expected to reside in future. Mr. Hertley visited the Pacific coast in 1926 in connection with laying of a duplicate cable between this country and Australia.

Hon. Phillips Roy, Canadian Commissioner in Paris, has been named first minister to France. This was indicated by the Prime Minister when the vote of \$75,000 for representation in Paris was discussed in the Commons.

The application of the Winnipeg Board of Trade for a revision of the regulations applying to the international travelling with car hires has been rejected by the Board of Railway Commissioners. The application was to permit more than one car to travel free in cars with car hires.

Norse Celebration in Winnipeg

Reported to be the Largest Gathering of Old Norsemen Ever Held in Canada

The Norse Celebration at Winnipeg from July 5th to 10th, promises to be the largest gathering of Norwegians held in Canada. It will be an international gathering, for thousands of Norwegians are expected from the United States and representative men from Norway will be present. The celebration will be presided over by the Canadian and United States Byelags, or Norwegian Societies, and the League of Norsemen of Canada have arranged to hold their annual meetings in Winnipeg during the week of the celebration.

Besides a good program of recreation, music and speeches, there will be Norse art exhibits, several of which are being brought from Norway. The feature item on the musical program to be given will be the numbers by the 1,000-voice choir of the Norwegian Singers' Association of America.

There are about 73,000 persons of Norwegian birth and origin in Canada of whom 52,000 are in the provinces of Manitoba, Saskatchewan and Alberta.

Visited Farm Activities

Some unusual sights were to be witnessed in the farming territory of Southern Alberta recently. In the same district it was possible to see ploughing, digging, seeding, threshing and hauling grain to the elevator at one time.

Build Eighteen Elevators

Eighteen elevators are being constructed by the Alberta Wheat Pool. Each will have a capacity of 30,000 to 40,000 bushels.

An English paper suggests that it is not so hard to escape from a flapper, "but a widow knows all the deuces."

Airmen in New Venture

Aviators Used to Check Spread of Rust in Western Canada

Shooting microbes from an aeroplane is the latest venture among aviators in the Royal Canadian Air Force. It has some of the fascination of a fast game, in addition to being an important undertaking for Canadian agriculture.

For the past few years the Canadian Federal Department of Agriculture has been trying to combat wheat rust, which makes its appearance in the great wheat fields of Western Canada, by working from the ground. The Department has now enlisted the aid of the Royal Canadian Air Force. The aerial spraying of wheat crops in agricultural bacteriology, as provided with specialized planes, is exposed to the air. The spores of wheat rust floating at high altitudes, are caught on the plane and analyzed.

The spores have been detected at a height of 8,000 feet, and the flies have been found in these invisible organisms which have registered as much as 5,000 to the centimeter. The spores float at this altitude and when there is a rainstorm they are precipitated and thus the rust appears in widely separated areas without any visible trace of contact. The use of specialized planes and the airplanes has revealed how rust has spread in the past, and provides means of checking one of the most serious to the wheat crop of Western Canada and the Western States.

Use of Electric Power Increasing

Canada is Second in Per Capita Consumption of Electricity

Norway, Canada and the United States lead the world in the per capita consumption of electricity, says the Geological Survey of the United States. Figures given by that authority place Canada's consumption in 1927 at 1,320 kilowatt hours per capita, compared with 680 kilowatt hours in the United States. That for Norway is given as 2,400 kilowatt hours in 1925. Other statistics given in the statement afford comparison with available data for Canada showing progress on the North American continent in 1927. The increase in output of public utility plants in the United States from 1926 to 1927, was about 9 per cent. The output of central electric stations in Canada, according to official figures of the Dominion Bureau of Statistics, for the same period gained 12 1/2 per cent.

The two statements also afford a comparison in the relation which water power bears to the total output in the United States the amount produced by water was 37 per cent. In Canada, 98 1/2 per cent. was produced by water power, only 1 1/2 per cent. of the electricity of central electric stations being produced by fuel. — Bulletin by the Department of the Interior, through its Natural Resources Intelligence Service.

Cannot Locate Owner

Ireland Unable to Collect Taxes On Valuable Land

How to collect taxes from a land that nobody wants and yet is occupied is puzzling the May County Council of Ireland. In Letterbrick, North Mayo, are 2,281 acres, the owner of which cannot be found. Some time ago the Land Commission bought the estate of which those acres are part, but refused to include them as they consisted mostly of mountain land and could not be used for farming.

The adjoining tenants have taken possession of the mountain and now graze it in common. The Land Commission is unable to interfere, and the Mayo County Council wants to use by law taxes on the land, but cannot compel them to do so because they are not the legal ratepayers.

Man may want but little here and there, but he wants it just as quick as he can get it.

Farmers' Marketing Tour

Canadian National Railways' Tour To Great Britain and Denmark, 1928

Continued.

The Co-operative Wholesale Society of England, a powerful force in modern industry and commerce. It manufactures everything that the modern household needs. It owns a fleet of ships, a fleet of motor trucks, a fleet of warehouses, fishing stations, tea plantations, and farms in the British Isles. It operates a bank, which has an annual turnover of over a million dollars. Its principal office is in London. It is the largest in Europe and works day and night. Here great quantities of Canadian wheat are regularly used. This was our first point of inspection. We were all equipped with long white coats and spent two hours erecting this tremendous structure.

Following our visit to the C.W.S., we were the guests of the Chamber of Commerce at a meeting arranged by representatives of the Fruit and Provisions Trades, who addressed us on the state of the trade in Great Britain. We were thus again enabled to gather much useful information.

We now hurried back to our hotel to get ready for one of the outstanding functions it was our privilege to attend. It was the reception by the Lord Mayor and Lady Mayoress of Manchester. Over 100 guests were present, and the occasion was the most important of the trip. The main body of the brilliantly lighted main hall of the hotel was filled with guests. The Lord Mayor, who is one that will never be forgotten by those who attended.

On the morning of the 20th we were taken through Trafford Park, one of the largest industrial areas in the world. Here there are great quantities of goods for products from every quarter of the globe that find their way to the homes of the people. The goods were on view, but competing products from other countries were more in evidence. We saw the great stores of the world, and the goods of the world. The latest cotton storage safes from New Orleans were being shown.

We were here privileged also to see one of the greatest industrial plants in the world, the Vickers Electrical Works—the magnificence of which could not be comprehended by one who has not seen it. Here is made everything electrical that is used in the world. The stations to the smallest domestic appliances, the equipment of the great cities, is made here. The output of the plant is 500 feet long by 40 feet wide. The output of each shop being 440 feet, and 80 feet from the floor to the ridge of the roof. The plant is a masterpiece of engineering, and is a masterpiece of the world. The plant is a masterpiece of the world. The plant is a masterpiece of the world.

After viewing the Ship Canal we were the guests of the company to a magnificent lunch at the Midland Hotel, to which were gathered the leading business men of Manchester. Following this we paid a short visit to the Royal Exchange, the largest building in the world, with a ground-floor space of one and three-quarter acres. Unlike trading exchanges in our country, seats are not owned, but members join on an annual fee basis. The Royal Exchange of Manchester represents chiefly the cotton industry and those who trade in it.

"High change" is on Fridays, when as many as 7,000 men may be seen gathered together buying and selling on the floor of this Exchange.

Our Journey from Manchester to Wolverhampton provided a mild adventure, for by the time the coaches had reached Knutsford, a little town made famous by a Gaskell, in her story "Cranford," a fog blazed and we were able to continue the journey. It was a fog of the kind that would mean a night in the coaches by the side of the road, with the risk of being rammed from behind by either motorists. After an hour's wait, however, the fog lifted and it was decided to push on as long as the fog could be seen. The coaches then. The headlights were turned on and the coaches were driven on. The fog was so thick that the coaches were standing on the running board, making progress at about five miles an hour. During this long and tedious journey we sang songs and told stories, and the time flew away at all quite pleasantly.

Wolverhampton, at 11:30 hours, notwithstanding the late hour we found the Mayor (Councillor E. Wood), waiting for us and a steaming supper which was certainly welcome. In the circumstances, the Mayor cut out all formality (inviting us to join him after supper in the lounge where he was entertained). Here also we met Mr. E. W. Brown, the General Manager of the Canadian National Railways, who, besides his duties as General Manager, is also a class reputation as a Canadian singer, and kindly gave us of his best. We left Wolverhampton immediately after breakfast for the ham and beef of the morning. The train was a class reputation as a Canadian singer, and kindly gave us of his best. We left Wolverhampton immediately after breakfast for the ham and beef of the morning. The train was a class reputation as a Canadian singer, and kindly gave us of his best.

(To Be Continued.)

Recipes For This Week

(By Betty Barclay)

LIGHT LUNCH COQUETTES

Two cups lettuce or meat or cream may be mixed with 1 cup thick sauce for croquette. Mold in desired shape, roll in dried bread crumbs, coat in beaten egg, again in bread crumbs and fry in hot fat. Thick sauce made calls for 1 cup milk, 1-3 cup flour, 3 tablespoons butter, 1/2 teaspoon salt and a touch of pepper.

RHUBARB FUNCH

1 quart rhubarb.
1 quart water.
1-3 cup orange juice.
4 tablespoons lemon juice.
1 1/2 cups sugar.
9 grains salt.
1 pint mineral water.

Cut rhubarb in small pieces, cook with water until it is soft. Strain through double thickness of cheese cloth, add orange juice, lemon juice, sugar syrup and salt. When ready to serve pour over a cake of ice in a punch bowl, add mineral water and allow to get very cold. Makes 8 glasses; 24 punch glasses.

Big Aerial Camera

Machine Has Five Mile Range and Pictures Four Square Miles

An aerial camera with a range of more than five miles, designed to photograph areas as large as four square miles, has been built for the United States army by the Fairchild Aerial Camera Corporation. It received its first tests at New York, and was sent to Wright Field at Dayton, O., where it will be installed in an army plane for extensive experimental photographic work.

The camera was made by the Fairchild Aerial Camera Corporation for use at altitudes at which photography never before has been attempted and beyond the range of anti-aircraft guns.

The per capita consumption in Canada of wheat ground for food for the years 1919-27 averaged 4.7 bushels.

There are times when the almighty dollar will not go as far as a little politeness.

SHIP CHRISTIE'S BISCUITS BY AIR FREIGHT

When Major Fitzmaurice, the Irish member of the "Bremen" crew arrived at Seven Islands from Greenly Island, he and "Duke" Schiller, pilot of the relief plane, were met by Mr. L. A. Genest, Lower Quebec representative of Christie, Breakey & Co., Limited, and Mr. Stewart of the Clarke Trading Company, who tendered them the ship's biscuits. The biscuits were, naturally, much appreciated. The above picture shows the aeroplane which carried the first shipment of Christie's Biscuits by Canadian air freight from Toronto to Windsor.

THE ARREST AND TRIAL

Golden Text: "He was despised and rejected of men." Isaiah 53:3.
Lesson: Mark 14:43 to 15:15.
Devotional Reading: Isaiah 53:1-4.

Explanations and Comments

Plate Questions, Jesus, verses 1-5. — It was about six o'clock in the morning when the chief priests and the elders and scribes of the whole council of Sanhedrin, after holding a meeting, deciding Jesus worthy of death and binding Him, hurried Him to the Praetorium where Pilate held court. Pilate was obliged to come out to them, for the priests would not pollute themselves by entering a Gentile court just before the Passover (John 18, 28, 29). They demanded that Pilate condemn their sentence of death pronounced upon Jesus. Pilate demanded to know what charge they brought against Him. Three accusations they put forward: Pilate was concerned about one of them only. "Art Thou the King of the Jews?" Pilate questioned the Sanhedrin made this accusation against Him because they needed a political change, one hostile to Roman supremacy, in order to influence Pilate. Perhaps there was something of contempt and something of pity in Pilate's closed and hard look. He saw a pathetic prisoner and thought Him a worthy prisoner of royalty. Pilate had the right to know the truth, he answered "Yes," as the literal rendering of the Greek word "Ja" means "Yes." (The Expositor's Bible Commentary, Vol. 1, p. 100.) Pilate was prepared for such a reply to an equivocal question, and says there is something in this. "You say Thou art a Jew?" "I am a Jew," he answered. "I have had to learn to keep absolutely quiet under every accusation." — Lincoln.

When the chief priests accused Jesus of many other things, he was silent. "Answerest Thou nothing?" he asked. "Behold how many things they accuse Thee of." Still Jesus stood in regal silence, and Pilate marveled at him. He knew that no words would influence that man in his frame of mind. "I read very little of the life of Jesus respecting His rights," F. W. Robertson writes, "but I hear a vast deal respecting His wrongs—poor, born with a majestic, God-like silence."

"I have had to learn to keep absolutely quiet under every accusation." — Lincoln.

Winnipeg Newspaper Union

A luncheon party of twenty men inside an organ would seem impossible, yet this happened lately in the Winnipeg organ. It was the Royal Albert Hall, London, beneath its 12,000 pipes and amid a storm of music.

The guests had come to be shown some of the intricacies of this wonderful instrument, which is soon to have added to it a solo organ with several thousand new pipes. It will then be the largest concert organ in the world.

At this strange luncheon party one of the hosts was Dr. Eglefield Hull, the organist, who is shortly giving a series of recitals to test every resource of the huge organ.

Praise For Canada

Mrs. Stanley Baldwin Cannot Imagine Anything Nearer

"If England ever gets tired of us, the prime minister and I will probably go to live in Canada, that is if we are not too old, for we were so delighted with the Dominion on our recent visit."

After the declaration of Mrs. Baldwin, wife of Great Britain's premier, Stanley Baldwin, when addressing the girls at a distribution of prizes at the City of London school.

Mrs. Baldwin urged the girls to go to Canada for, she said, "there is no better place for young married people; and providing girls choose the right kind of man, I cannot imagine anything nearer paradise."

New Assistant: What is in that red bottle?

Old Hand: "That's the medicine we use at our place when their prescriptions are illegible."

Overtake the "72"?
... well, hardly!

ALL cars today seek to approximate Chrysler "72" performance by patterning after Chrysler engineering. But after three years of striving, how close are they to the "72" today? No closer than they were four years ago.

As they have struggled to approach, Chrysler "72" has pulled away and gallops around and past them with more than the ease of the old original Chrysler sensation-car of 1924.

There may be pocket-book reasons for choosing cars of lesser price than the "72." There simply cannot be a valid reason for paying as much or more for any car other than the "72."

Enjoy your holiday with a Chrysler "52". To-day's best car value. G. A. Morrison, agent.

Monday's rainfall amounted to .14 in.

WEDDING

Peck—le Marchant

A very pretty wedding was solemnized at St. Albert's Church, Oyen, on Saturday, June 2, when Miss Sylvia le Marchant, daughter of Rev. and Mrs. le Marchant, of Bolton, England, became the bride of Mr. Edward F. Peck, son of Mr. and Mrs. G. S. Peck of Oyen, Alta. Rev. Charles Wright, incumbent of St. Albert's, Oyen, conducted the service.

The bride, who looked charming wearing a dress of cream crepe back satin trimmed with lace and orange blossom, a bridal veil of embroidered tulle, and carrying a bouquet of white carnations and asparagus fern, was given away by Mr. G. S. Peck, in the unavoidable absence of her parents, while Mr. David A. Peck supported his brother as best man. The wedding march and music for the service was played by Mr. Geo. Benbow. Mrs. G. S. Peck, the groom's mother, was dressed in black flowered satin trimmed with Carrick Macross lace and wore a hat of rose pink silk and trim with beige georgette and velvet flowers.

The little church on the corner has a pretty interior and it was beautifully arranged with plants and flowers provided by the women's guild and their friends for the occasion, this being the first wedding to be held within its doors.

In the evening a dance was given in the Masonic Hall by Mr. and Mrs. Peck, when some one hundred and twenty-five guests had a most enjoyable time to the music of the Oyen Imperial Orchestra.

The happy couple left for Calgary and Banff on the night train to which they were riotously escorted by half the wedding guests with many cheers and much rice.

First Annual Ball Tournament

(Continued from page 1)

up their score, while Wes Horne, who was pitching a wicked ball held his opponents to a few scattered hits, until the ninth when he was nicked for 3 runs.

Score by innings:
OYEN..... 504 103 011—15
CHINOOK .. 130 000 003—7

The horseshoe tournament was won by Fownes and Betts of Alaska. Iverson Bros. of Sedalia won the second prize.

During June and July, Wednesday half holiday will be observed by the business men of Oyen. Stores will close sharp at 1 o'clock.

George J. Benbow
PIANIST AND TEACHER
